

Are You Ready?

ISDN disconnections begin September 2019

Don't wait to be cut off, act now.

Most businesses in Australia are connected to the phone network using ISDN, an old technology that is being phased out and replaced in the coming months.

Upgrade to SIP today and beat the rush to ensure no loss of phone service.

Starting from the end of September 2019

ISDN services will begin being disconnected, with all services to be **terminated by 2022**. The clock is ticking for companies relying on ISDN to find an alternative solution.

Thankfully, **a solution exists** and it's cheaper and more efficient than ISDN. The replacement is Session Initiated Protocol (SIP) and is the future of business communications.

Are you ready?

- ✍ End of ISDN
- ✍ SIP Introduction
- ✍ NBN Rollout

.....
If you are uncertain about any of these, contact us and we will assist.

We are ready for you.

Important notice

With the end-of-life of older carrier services due to the final rollout of Australia's NBN, there may be a significant impact and cost ramifications for your business. With these changes to carrier services, there are several points to consider in selecting the right phone system for your business. You may wish to retain autonomy for your business of which service providers you use, both now and in the future. Alternatively, you may wish to be locked in to a one size fits all approach in service provider, solution and call rates. Whichever you choose, whether you have an entry level or sophisticated communications system, NEC has the right solution for you.

Frequently asked questions

Q: Why do I need to be ready for SIP and VoIP?

With the imminent cessation of ISDN, switching to SIP technology should be a business priority. A SIP Trunk is the digital equivalent of a traditional phone line, it connects to a PBX, a device that provides the brains behind the phone system enabling multiple users to share lines. SIP offers a number of key advantages over ISDN including carrying voice and data across a single connection. NEC has technology ready for this migration, including the SL2100 and UNIVERGE SV9100. To make the switch or find out more, reach out to your NEC Channel Partner today.

Q: Why do I need to be ready for NBN?

The NBN roll out has long been underway and will be replacing traditional phone lines. Meaning your existing hardware will most likely be incompatible. To ensure your business avoids down time, loss of productivity and income; upgrade now. Some older NEC systems and the current SL2100 and SV9100 systems support phone services enabled by the NBN network. Regardless if you are going to use SIP Trunks directly or your carrier is providing you with a conversion appliance; your NEC system is ready either way. These NEC systems support both old and new technologies, providing you the choice to cater for these events now or later.

Q: What can NEC do for me?

Whether you are looking for an entry level or sophisticated communications system, we have a solution for you.

NEC SL2100

Delivering enterprise capabilities at a price that any small business can afford. At its core it is a pure IP communications platform, ready to be connected to your favourite carrier over SIP Trunks or traditional services. It boasts built-in audio, video and web conferencing, a complete web based UC client, unified messaging and even toll fraud protection!

The SL2100 is topped off with a stylish and sophisticated range of digital handsets and the new self-labelling gigabit IP phone will be sure to impress.

NEC UNIVERGE SV9100

A unified communications solution of choice for small and medium businesses (SMBs) who do not want to be left behind. Designed to fit your unique needs, the UNIVERGE SV9100 platform is a powerful communications solution that provides SMBs with the efficient, easy-to-deploy, mobile technology that they require.

Reliable and adaptable, the SV9100 is built on cutting-edge technology that supports voice, unified communications and collaboration, unified messaging, and mobility out-of-the-box, all the while remaining easy to manage.
