## Cel Fi Go Education Promotion

Working or home schooling can be a challenge for most of us at the best of time but add connectivity issues caused by lack of mobile signal, internet dropouts or working in one corner of the house. this may cause an essential trip to your local bottle-o.

At WTC we understand your pain and can help.

Our range of products and services can be matched to your individual location and requirements. One of these products is the Cel Fi GO mobile signal booster. This is a small box installed in your house with an antenna installed on the roof as well as an internal antenna for distributing the boosted signal throughout the building.

All members of the house can share the signal as normal via their mobile phone, mobile broadband or 4G modem.

Because we have installed so many of these products over the years with no complaints, we know they work and will also solve your issues as well. Yes, they are not cheap but are value for money and it can get your family back to being productive in no time.

I have put together an education promo on our main 2 signal booster packs.

### Hardware

\$100 off the price of the Cel Fi Go pack.

### Install

I will do our standard on site install fee of \$380inc and not charge travel within 30min of Warrnambool.

Eg Port Fairy, Mortlake, Timboon, Cobden, Terang

**NEC** **Panasonic**

RRP \$1,386.49

**Less Discount \$100**

\$1,286.49ex

\$1,415.14

**Standard Install**

\$380inc

The Yagi antenna is pointed directly at the Mobile tower to provide the best gain. Used if you have 1-2 bars of service outside.

The Omni antenna picks up signal in a 360 degree radius. Good if you have 3-4 bars outside and less signal inside.

As the Yagi antenna is not that much more expensive you can play it safe and go straight to that option or if you have the option to go with the Omni and have 3-4 bars outside this will just come down to how you want the antenna to look on your roof.
